

## FibreRap™

FibreRap™ is a combination of film laminated to a special Thermoformed paper to create shallow trays on horizontal thermoform fill-seal packaging machines. The lidding film substrate is also a combination of film laminated to paper with or without an aperture.

- FibreRap™ reduces the amount of plastic materials by over 80% compared to Thermoformed plastics with lidded film
- 60% reduction in weight on average against current Thermoformed pack format
- MA Capability
- Residual O2 Levels <math>\leftarrow</math>1%
- Heat sealed & gas flushed by available MAP machines
- Bespoke window shapes available
- Extended shelf life, depending on ingredients
- Excellent print and branding opportunities
- Packs are suitable for ambient, chilled or frozen (down to -20°C) applications
- Environmentally responsible with use of oil based plastic reduced
- Easy opening
- On average, the HS Tray is LIGHTER than a standard plastic tray/film & card sleeve
- Registered print capabilities on lid & base
